Ornamental plants

### REGISTRATION

GENERAL SALE

### COMPOSITION

Synthetic copper resin, 0.48% copper ready-to use-paste, applicable by brush.

### FEATURES

ARBOKOL COPPER is a multi-purpose product that combines grafting glue with the beneficial properties of copper. It can be used on all vegetables, trees and shrubs to protect a wide variety of wounds (due to cutting, pruning, atmospheric agents, etc.). Copper makes this ARBOKOL COPPER formula unique due to its highly effective power to cover cuts.

A thin but even layer is sufficient. Once formed, the film will protect the treated part of the plant without cracking. It is the ideal product for amateur gardeners and professional agricultural settings. It improves the natural resistance of plants to environmental adversities.
