REGISTRATION

BIOCIDE

COMPOSITION per 100 g

Pure imidacloprid
Co-formulants as needed up to

FORMULATION: Gel

FEATURES

GEL ANTS is a ready-to-use insecticide gel for all types of ant that feed on sugar and are considered a pest, such as the Argentine ant. GEL ANTS has been studied to offer total effectiveness in tackling ants both indoors and outdoors environments, allowing localised and precise applications in cracks and fissures. GEL ANTS has a delayed deadly effect, acting within a few hours. The ants carry the bait back to the nest and spread it inside the colony, resulting in its complete destruction.
