

CAPSULES FOR TACKLING MOSQUITO LARVAE

MOSQUI-CO DROPS

Ready-to-use capsules to ecologically control mosquitoes life cycles

Controls the life cycle of mosquitoes at the larval level

Innovative capsule formulation, safe and ready-to-use

Physical-mechanical action

Insects

Mosquito larvae

REGISTRATION

DEPENDS ON THE COUNTRY

COMPOSITION per 100 g

Polydimethylsiloxane (silicone)
Inert ingredients and coadjuvants

FORMULATION: Liquid product in capsule form

FEATURES

MOSQUI-CO DROPS is a unique, new generation product for tackling mosquito life cycles. It is both eco and environmentally friendly. It can be applied to small, still and stagnant pools of water in domestic environments (flowerpot dishes, wells, domestic drains, gutters, drains, water tanks, water containers, tyres, etc.). Each MOSQUI-CO DROPS capsule is made from a plant cellulose derivative and is entirely degradable in water.

Mosqui Co does not allow larvae and pupae to take in the correct amount of atmospheric oxygen needed for the adult stage of their development. It also prevents progress during the early stages of the mosquito life cycle (larvae and pupae). It uses a physical-mechanical action, remaining persistent and effective for at least 4 weeks. It uses a physical-mechanical action that remains effective for 4 weeks.
